EIGE/2011/OPER/24 Questions & Answers Nr 3

Question 1:
In the specifications (section 1.4.5, pages 5 and 6), is requested a presence awareness integrated with the social networks; how this feature should work? We have thought about two cases:

1. If the user is online in Facebook (independently if he/she accessed EIGE network) he/she will be inserted in the list of online members;
2. The user should be inserted in the list of online members only if he/she accessed the EIGE network through Facebook.

Could you please clarify what of the above two solutions is requested?

Answer 1:
If the user is not logged into the EIGE's network, there should be no information about the member status from other social networks displayed.
It should be implemented as stated in the specifications (1.4.5 on page 6):
Presence awareness has to be integrated with social networks, - if the member is authenticated via social network, the portal shall include presence information from that particular social network about the member.

Question 2:
According to the specifications the tenderer should create two specific workspaces: a "Thematic network workspace" and a "Community authoring workspaces". The features list of the two spaces are almost equal. Could you please clarify the differences between the two workspaces?

Answer 2:
The "Thematic network workspace" is the online work space for EIGE's already established thematic networks and permanent "working groups". As well as future thematic networks created/initiated by EIGE. Access to these work spaces is limited to members only and you become a member by invitation only.

The "Community authoring workspaces" could be initiated by EIGE, *or* by members of the network (approval of EIGE is necessary) around a certain topic or project. These work spaces would be open to all members of the network.

The functionalities within the two work space types will be very similar.

Question 3:
In addition to the paper version of the documents requested, is the tenderer allowed to put into the envelope marked as "Technical" a CD-ROM/USB flash drive containing the electronic version of the documents?

Answer 3:

Paper versions are required. The tenderer is allowed to provide electronic version additionally to paper ones.
